1.0 INTRODUCTION

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected 18 and 19 September, Third Quarter 1996.

2.0 QUARTERLY MONITORING PROGRAM

Third Quarter 1996 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 18 September 1996 prior to initiating purging of groundwater from any observation well. Static water depths in monitoring wells (MW-8, MW-9, MW-18 and MW-19) located in the southern portion of the DAC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter.

Groundwater samples were collected from the following fifteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Third Quarter 1996.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown in Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the Third Quarter are presented in Figure 4. Historical chemical concentration profiles for the indicator chemicals trichloroethene and 1,1-dichloroethene are shown in Figure 5. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, and temperature. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the flow rate of the submersible pump was reduced to 200 milliliters/minute. To collect a representative groundwater sample, the pump intake valve was positioned at the approximate mid-point of the saturated well screen interval. The recovered water was discharged into three labeled 40-ml capacity vials, preserved with HCl.

2.2 Field QA/QC Procedures

Duplicate groundwater samples were collected for the sampling round on 18 and 19 September 1996 for quality control purposes. The duplicates were collected in three HCl-preserved vials and identified by inserting the collection date after "DW-" (DW-091896 and DW-091996). No further sample identification was provided to the laboratory. Duplicate samples were taken on 18 and 19 September from observation wells WCC-1D and WCC-6S, respectively.

Following decontamination of the submersible pump, and prior to collection of groundwater samples from the successive well, an equipment rinsate blank was prepared for laboratory analysis. The equipment rinsate blank was prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, over the pump and collecting the rinsate in two 40-ml vials preserved with HCl. The blank was identified following a similar protocol to that used for duplicate water samples and is identified as "EB" followed by the date. EB091996 was collected after sampling well DAC-P1. Trip blanks were also analyzed for sampling and shipping activities for each day of sampling and are identified as TB-091896 and TB-091996.

All groundwater, duplicate, and field blank samples were transported in ice-cooled chests to Quanterra Environmental Services, Santa Ana, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 18 September 1996 (Table 4 and Appendix C). The shallow zone groundwater elevations measured for this quarter ranged from 14.64 feet below mean sea level (MSL) to 15.95 feet below MSL. An estimated potentiometric surface map for the shallow zone as measured on this day is presented as Figure 4. The groundwater gradient in the shallow zone was generally east to east-southeast with a southerly directed trough-like depression between observation wells WCC-12S and WCC-7S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevations in the two wells (WCC-1D and WCC-3D) were approximately 15.65 and 15.50 feet below MSL, respectively.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all monitoring wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 15,000 micrograms per liter ($\mu\text{g}/\text{L}$) coming onto DAC's property (Figure 3). Other chemicals detected in well DAC-P1 include 1,1-DCE and toluene. The concentrations of these chemicals were within historical ranges. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE in the shallow zone upgradient or cross gradient wells decreased in WCC-10S and WCC-11S but increased in WCC-2S. Both contaminants are within historical ranges at concentrations of 98 to 150 $\mu\text{g}/\text{L}$ of TCE and 22 to 23 $\mu\text{g}/\text{L}$ of 1,1-DCE.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is generally in an southerly and southeasterly direction in the vicinity of buildings 36 and 41. Most chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-10S, WCC-2S and WCC-11S).
- In general, variances of the other chemical concentrations since the last sampling remain within typical historical ranges.
- Low concentrations of 1-methylethylbenzene (MEB) were detected for the first time in samples collected from wells WCC-2S, WCC-5S, and WCC-9S at 1.1, 1.2, and 1.1 $\mu\text{g}/\text{L}$, respectively.
- Analytical data from the equipment rinsate blanks, sample duplicates, trip blanks, and laboratory spikes and duplicates are indicative of reliable data.

LIMS NO.: 121378-0001/0005
DATE SAMPLED: 18-SEP-1996
DATE SAMPLE REC'D: 19-SEP-1996
PROJECT: DAC

Enclosed with this letter is the report containing the analytical results for the project specified above.

The Narrative section included in the following attachment provides a detailed description of all events that occurred during sample processing, analysis, and data review as applicable to the samples and analytical methods requested.

Report data sheets contain a list of the requested constituents measured in each test, the analytical results, and the standard reporting limits (RLs). Reporting limits are adjusted to reflect any dilution or dry weight correction, when applicable. Also provided in this report are the LIMS Report Key and the terms and abbreviations commonly used in our reports.

Preliminary data were provided on October 1, 1996 at 1:35 P.M. to Jay Knight.

The report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions regarding the data provided in this report, please call Pat Abe at (714) 258-8610. Release of this report has been authorized by the Lab Director or the designee as demonstrated by the following signature.

Sincerely,

Pat Abe

Project Manager

cc: Project File

Section	Description
Cover letter	Signature page, report narrative as applicable.
Sample Description Information	Tabulated cross-reference between the Lab ID and Client ID, including matrix, date and time sampled and the date received for all samples in the project.
Sample Analysis Results Sheets	Lists sample results, test components, reporting limits, dates prepared and analyzed and any data qualifiers. Pages are organized by test.
QC Lot Assignment Report	Cross-reference between lab IDs and applicable QC batches (DCS, LCS, SCS, Blank, MS/SD, DU)
Duplicate Control Sample Report	Percent recovery and RPD results, with acceptance limits, for the laboratory Duplicate Control Samples for each test are tabulated in this report. These are measures of accuracy and precision for each test.
Laboratory Control Sample Report	Percent recovery results for a single Laboratory Control Sample (if applicable) are tabulated in this report, with the applicable acceptance limits for each test.
Matrix Spike/Matrix Spike Duplicate Report	Percent recovery and RPD results for matrix-specific QC samples and acceptance limits, where applicable. This report can be used to assess matrix effects on an analysis.
Single Control Sample Report	A tabulation of the surrogate recoveries for the blank for organic analyses.
Method Blank Report	A summary of the results of the analysis of the method blank for each test.

List of Abbreviations and Terms

DCS	Duplicate Control Sample	MSD	Matrix Spike-Duplicate
DU	Sample Duplicate	QC Run	Preparation/batch
EB	Equipment Blank	QC Category	LIMS QC Category
FB	Field Blank	QC Lot	DCS batch
FD	Field Duplicate	ND	Not Detected, either reporting limit or blank
IDL	Instrument Detection Limit	QC Matrix	Matrix of the laboratory control sample
LCS	Laboratory Control Sample	RL	Reporting Limit
MB	Method Blank	QC	Quality Control
MDL	Method Detection Limit	SA	Sample
MS	Matrix Spike	SD	See MSD
RPD	Relative Percent Difference	TB	Trip Blank
ppm (parts-per-million)	mg/L or mg/kg	ppb (parts-per-billion)	µg/L or µg/kg
QUAL	Qualifier flag	DIL	Dilution Factor

Refer to the Quanterra Incorporated Quality Assurance Management Plan for detailed explanations of terms summarized above.

CASE NARRATIVE

LIMS # 121378

I. CONDITION UPON RECEIPT

The samples were not received in a cooler. The samples, however, were cold to the touch.

Sample containers were received intact. The VOA vials did not contain headspace. Sample container label did agree with the COC as to sample ID, collection time, and requested tests. The date of collection for all samples was verified with Jay Knight on September 23, 1996.

Samples were received in time to meet the method holding time specifications.

II. ORGANIC ANALYSES (BY METHOD: SW8260)

HOLDING TIME

All samples were prepared and analyzed within the method-specified holding time requirements.

METHOD BLANK

All method blanks met method- and/or project-specific QC criteria.

MS/MSD/LCS/DCS AND RPDs

All spike recovery and RPD data met method- and/or project-specific QC criteria.

SURROGATE RECOVERIES

All surrogate spike recoveries in samples and in QC samples met method- and/or project-specific QC criteria.

CALIBRATIONS

All calibrations and calibration verifications met method- and/or project-specific QC criteria.

LIMS NO.: 121425-0001/0015
DATE SAMPLED: 19-SEP-1996
DATE SAMPLE REC'D: 20-SEP-1996
PROJECT: DAC

Enclosed with this letter is the report containing the analytical results for the project specified above.

The Narrative section included in the following attachment provides a detailed description of all events that occurred during sample processing, analysis, and data review as applicable to the samples and analytical methods requested.

Report data sheets contain a list of the requested constituents measured in each test, the analytical results, and the standard reporting limits (RLs). Reporting limits are adjusted to reflect any dilution or dry weight correction, when applicable. Also provided in this report are the LIMS Report Key and the terms and abbreviations commonly used in our reports.

Preliminary data were provided on October 4, 1996 at 5:55 P.M. to Jay Knight.

The report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions regarding the data provided in this report, please call Pat Abe at (714) 258-8610. Release of this report has been authorized by the Lab Director or the designee as demonstrated by the following signature.

Sincerely,

A handwritten signature in black ink, appearing to read "M. V. Vologgas". Below the signature, the title "Project Manager" is printed in a smaller, sans-serif font.

Section	Description
Cover letter	Signature page, report narrative as applicable.
Sample Description Information	Tabulated cross-reference between the Lab ID and Client ID, including matrix, date and time sampled and the date received for all samples in the project.
Sample Analysis Results Sheets	Lists sample results, test components, reporting limits, dates prepared and analyzed and any data qualifiers. Pages are organized by test.
QC Lot Assignment Report	Cross-reference between lab IDs and applicable QC batches (DCS, LCS, SCS, Blank, MS/SD, DU)
Duplicate Control Sample Report	Percent recovery and RPD results, with acceptance limits, for the laboratory Duplicate Control Samples for each test are tabulated in this report. These are measures of accuracy and precision for each test.
Laboratory Control Sample Report	Percent recovery results for a single Laboratory Control Sample (if applicable) are tabulated in this report, with the applicable acceptance limits for each test.
Matrix Spike/Matrix Spike Duplicate Report	Percent recovery and RPD results for matrix-specific QC samples and acceptance limits, where applicable. This report can be used to assess matrix effects on an analysis.
Single Control Sample Report	A tabulation of the surrogate recoveries for the blank for organic analyses.
Method Blank Report	A summary of the results of the analysis of the method blank for each test.

List of Abbreviations and Terms

DCS	Duplicate Control Sample	MSD	Matrix Spike Duplicate
DU	Sample Duplicate	QC Run	Preparation batch
EB	Equipment Blank	QC Category	LIMS QC Category
FB	Field Blank	QC Lot	DCS batch
FD	Field Duplicate	ND	Not Detected at the reporting limit expressed
IDL	Instrument Detection Limit	QC Matrix	Matrix of the laboratory control sample (s)
LCS	Laboratory Control Sample	RL	Reporting Limit
MB	Method Blank	QC	Quality Control
MDL	Method Detection Limit	SA	Sample
MS	Matrix Spike	SD	See MSD
RPD	Relative Percent Difference	TB	Trip Blank
ppm (parts-per-million)	mg/L or mg/kg	ppb (parts-per-billion)	µg/L or µg/kg
QUAL	Qualifier flag	DIL	Dilution Factor

Refer to the Quanterra Incorporated Quality Assurance Management Plan for detailed explanations of terms summarized above.

TABLE OF CONTENTS

LIMS # 121425

Cover Letter	1

Narrative	4
Chain-of-Custody Records and Sample Description Information	
Analytical Results Summary (LIMS Report)	
A. LIMS Datasheets	
B. QC Summaries	

CASE NARRATIVE

LIMS # 121425

I. CONDITION UPON RECEIPT

The samples were not received in a cooler. The samples, however, were cold to the touch.

Sample containers were received intact. The VOA vials did not contain headspace. Sample container label did agree with the COC as to sample ID, collection time, and requested tests. The date of collection for all samples was verified with Jay Knight on September 23, 1996.

Samples were received in time to meet the method holding time specifications.

II. ORGANIC ANALYSES (BY METHOD: SW8260)

HOLDING TIME

All samples were prepared and analyzed within the method-specified holding time requirements.

METHOD BLANK

All method blanks met method- and/or project-specific QC criteria.

MS/MSD/LCS/DCS AND RPDs

All spike recovery and RPD data met method- and/or project-specific QC criteria.

SURROGATE RECOVERIES

All surrogate spike recoveries in samples and in QC samples met method- and/or project-specific QC criteria.

CALIBRATIONS

All calibrations and calibration verifications met method- and/or project-specific QC criteria.

Distribution: Inspection File (orig)

Field File

By 

Job Title DACJob No. 944016.0'Date 9/18/96Sheet 2 OF 3

- 1100 Finished measuring water levels in all wells.
- 1115 Left site to buy supplies.
- 1200 Returned to site. Began setting up pump to purge wells with 3/4" clear PVC Hose + a Redi-Flow 2 Pump.
- 1430 Finished decon + all setup + began purging WCC-SS at 85 bgs.
- 1445 Pump thermally overloaded at 10gal. purged from well.
- Will allow pump motor to cool + resume purge.
- 1447 Resumed purge. Will move pump around in casing manually to allow pump to remain cool.
- 1450 Pump overloaded again.
Pulled pump from well + moved to decon area.
- 1510 Unscrewed hose + lead from reel + began re-building + rewiring pump.
- 1600 Finished respooling pump + moved back to WCC-SS to finish purge.
- 1619 Resumed purge.
- 1636 Collected sample # WCCSS-16 after 60gal. total purged.
- Sample collected in 3-40ml vials + loaded immediately into a cold ice chest.
- 1648 Began deconning pump, hose, lead + depth sounder for use in WCC-9S.

Inspector

Job Title DACJob No. 944016.01Date 9/18/96Sheet 3 of 3

1705 Began setting up at WCC-95

1717 Began purge from 85' bgs.

1737 Finished purge at 40 gal. + collected sample #
WCC95-16.

1750 Performed decon of pump + related equipment.

1800 Began setting up to purge + sample WCC-1D
WCC-1D is a deep well + the total purge
volume is 133.38 gal.

1809 Began purging WCC-1D from 120'.

1847 Finished purge + collected sample # WCC1D-16.
Purged 135 gal. into 3 drums.

1930 Finished closing drums, well, loaded the truck
+ left the site.

-Note: Collected the duplicate sample # DW-091896
from WCC-1D.

Collected sample by filling VOAs for WCC1D-16
+ DW-091896 alternately until all VOAs were
full.

Work Report (Work done, Personnel/Equipment working) Objectives: Purge + Sample monitor wells on DAC site.

600 Arrived at site. Began decontaminating equipment with steamcleaner + soapy water rinse.

655 Began purge WCC-10S from about 85' bgs.

708 Finished purge at 45 gal. removed. Lowered flowrate to 250ml/min for sample.

712 Collected sample # WCC10S-16.

725 Began clean.

737 Began setting up at WCC-2S. Will purge from 45' bgs.

743 Began purge.

757 Finished purge + lowered purge rate to 250ml/min.

800 Collected sample # WCC2S-16.

815 Began clean.

830 Began setting up to purge well WCC-11S.

832 Began purge, - pH measurements are erratic.

850 Collected sample # WCC11S-16

Distribution: Inspection File (orig)

Field File

By 

Job Title DACJob No. 944016.01Date 9/19/96Sheet 2 OF 3

900 Left site to buy batteries for pH meter.

932 Began setting up to purge WCC-12S.

954 Collected sample # WCC12S-16.

1018 Setting up at WCC-7S.

1024 Began purge.

1050 Collected sample # WCC7S-16.

1105 Began setting up at WCC-8S

1128 Collected sample # WCC8S-16.

1158 Began purging well # WCC-4S.

1215 Collected sample # WCC4S-16.

1230 Began setting up to purge WCC-1S.

This is a 2" well with about 1gpm max recovery/pump rate.

1246 Began purging WCC-1S at about 1gpm.

- Could not measure depth to water during purge because of small dia. well.

1300 Finished purge at about 12gal. purged.

Lowered pump rate to 250ml/min for sample

1304 Collected sample # WCC1S-16.

1322 Began purging WCC-3D from about 100' bgs.
Total purge volume is 138 gal. (TD is 138.52)

1430 Collected sample # WCC3D-16.

Inspector

Job Title DAC

Job No. 944016.01

Date 9/19/96

Sheet 3 OF 3

- 1508 Began purging well # WCC-3S.
- Well water has a light, silver stream + a mod. solvent odor.
- 1526 Collected sample # WCC3S-16.
- 1602 Began purging well # WCC-6S.
- Water does not appear to have a stream but does have a strong sour odor.
- 1624 Collected samples # WCC6S-16 + DW-091996.
DW-091996 is a duplicate sample collected by alternating containers between the dip. + sample until all bottles were full.
- 1650 Finished decon. I removed the decon ~~station~~ station, closed the rinsate drum + moved to DAC-PI.
- Final decon (after DAC-PI) will be performed at DAC-PI.
- 1714 Began purging DAC-PI. I set the purge rate to about 2gpm because of slow recovery rate.
- 1742 Collected sample # DACPI-16. After sample was collected I pulled the pump + cleaned for the Equipment Rinsate Blank.
- 1800 Collected EB-091996 by pouring distilled water over the clean pump head + collected the rinsate in VOA's.
- 1835 Left site.

Inspector
